

# A Future Vision To Develop The Private Section Education In U.A.E.

Dr. Mahmoud Ezz Eldin Abdel-hady\*

## Abstract

Education plays a vital role in economic development & social progress of any nation. In the recent years, gross enrolments in the private education have been increased to 234341 students in U.A.E. represents 42,7% of the total number of students in the educational system (citizens are estimated 13%)

The current study aimed at diagnosing, analyzing, evaluating the existing situation of private education in U.A.E. to suggest a future vision from parents and school principals perspective, to develop the private education in U.A.E. by using the Delphi/Dialogue Technique Methodology.

Four rounds had been completed:

Round One: Dialogue between parents and school principals to recommend areas for improvements in the private education

Round Two: Individual reflection (Delphi) to state goals for improvement.

Round Three: Group reflection (Dialogue) to reach agreement over the improvement.

Round Four: Representative group reflection (Dialogue) To suggest the final vision.

The suggested vision included aspects such as: management, teachers, buildings, costs, admission age, curriculum, exams, professional development, computer uses, and discipline.
